Deer Ban repels deer, protects garden and landscape plants

Summit® Deer Ban™ repellent capsules keep deer from eating ornamentals and other landscape plants. The biodegradable active ingredient provides up to 90 days of protection.

Hungry deer can devastate flowers, vegetable gardens, shrubs and other landscape plants. Summit® Deer Ban™ repellent capsules keep deer from eating ornamentals and other landscape plants. Deer Ban™ uses a unique gel-tablet application to provide 100% effective, year-round protection from wildlife damage. Each Deer Ban™ capsule contains predator urine that triggers a deer's animal flight response.

Just set out the capsules on the ground every 10 to 20 feet around the plants you want to protect. Then water the capsules to release the active ingredient for up to 90 days of protection.

When activated by water, the polymer gel releases the scent of predator urine. Deer have a keen sense of smell, and they recognize that a predator is nearby and avoid the area. But Deer Ban™ is odorless to humans, and your hands never touch the active ingredient. There's no messy spraying, and no mixing or measuring.

Unlike most deer repellents that wash away and become ineffective after rain, water actually enhances the effectiveness of Deer Ban™. That's because the polymer gel actually needs to absorb water to activate the odor of the active ingredient. The biodegradable Deer Ban™ will continue to be reactivated by rain or watering for up to three months.

Summit® Deer Ban™ is available in packages of 20, 50 and 150 capsules. Summit Responsible Solutions also makes Mosquito Dunks®, Mosquito Bits®, Summit® Year-Round® Spray Oil and other natural and organic pest control products.
